

Supply chain labor

The work: Manufacturing chips, assembling devices, packaging.

Key facts to research:

- Foxconn (Apple, others)
- Semiconductor fabrication plants
- Working conditions, wages, suicides
- From factory to data center

Sections: Stats, stories, systemic analysis

1. The Zine/Infographic

- PDF or image files
- High enough resolution to read all text
- Professional but accessible design

2. Research Notes (300 words)

- What sources did you use?
- What was hardest to find?
- What surprised you?

For this project, I tried to use reliable sources like scholarly websites from universities, as well as non-profit organizations for advocacy. This way, the reports are not coming directly from the company, as these may be biased. The hardest thing to find was any information from the company about potential abuses of human rights, because they are never going to out themselves on this. I was surprised by the fact that companies decide to continue working with companies like this despite all of their problems. I was also surprised that there was a compensation given for those who died by suicide that was taken away, because it is shocking that there is even enough of that to happen that instead of fixing working conditions, they throw money at it. That is not acceptable. The company should have instead improved labor conditions and made lifestyle improvements rather than ignoring the issue. That was really hard to read about. It was really upsetting. Something that was a bit easier to find, however, would have been the statistics. The human rights advocacy websites that I looked at had a lot of percentages and metrics that were helpful for making my infographic. I think this is because it is easy to understand information presented in numbers and is very helpful. In this case specifically, this can help motivate people to make change once they understand the situation through these numbers. I also thought it was interesting that it

was so easy to find a list that was very long of all of their violations on the human rights violation website. It is really sad that the list was so long, and I was super surprised. I guess one sometimes doesn't fully realize how harmful people valuing only money can be, and it's really important not to be this way.

3. Design Statement (250 words)

- Why did you choose this format?
- Who is your audience?
- What do you want them to feel/do?

I chose to make an infographic on Canva because I feel like it would allow for the most colors, numbers, and symbols to be used effectively and convey my message best. The audience for my project is consumers in the U.S., because it is supposed to motivate them to think twice before buying a product that uses this company or others similar. These consumers can be any age, because many young adults as well as older people have products from Apple, Nintendo, Microsoft, and Sony. It may also motivate them to advocate further for the human rights of these employees and do research on other companies to make sure that this isn't happening in other places as well. Canva also made it easy to integrate symbols into the design with the click of a button through their template and design features. All I had to do was search for the correct symbols that blended in well with the topics I was discussing, and I could use them. This helped make my infographic more engaging by including multimedia graphics aside from only words. I hope that this infographic is helpful for people. At the very least, I hope it is educational. If possible, it would be good to be able to prompt action steps to come from this infographics. This is why I decided to include a list of things people can do to help combat this issue. By inspiring people to make a change, hopefully these human rights violations will end at not only Foxconn, but also hopefully other companies that are doing similar things too.

4. Attribution

- All sources cited (use any citation style consistently)
- Images credited or noted as AI-generated
- Tools used listed

The sources I used were as follows:

Li, Gang. "Apple Learns an Important Lesson on Integrating Ethics Into Operations". Bentley University, April 14, 2016

<https://www.bentley.edu/news/apple-learns-important-lesson-integrating-ethics-operations>

Beckett, Lois. "By the Numbers: Life and death at Foxconn". Pro Publica, January 27, 2012.

<https://www.propublica.org/article/by-the-numbers-life-and-death-at-foxconn>

Canva was used for the making of this project.
